

# Grant Master User Guide

## Welcome to Grant Master

Grant Master is an AI-powered platform designed to help researchers and entrepreneurs create winning NIH SBIR/STTR grant applications. This guide will walk you through all the features and how to use them effectively.

- 

## Getting Started

### Accessing the Platform

Visit <https://new-grant-genius.vercel.app> to access Grant Master.

### First Steps

1. From the Dashboard, click "**Ready To Grant**" to begin
  2. Choose your starting point based on where you are in the process
  3. Follow the guided workflow to build your application
- 

## Dashboard Overview

The Dashboard is your home base. Here you'll find:

---

Section	Description
<b>Ready To Grant</b>	Main entry point to start or continue your application
<b>What We Help With</b>	Overview of supported grant types and features
<b>Additional Tools</b>	Quick links to Letters Generator and Regulatory Sections
<b>My Applications</b>	List of your in-progress and completed applications

---

## Starting Your Grant Application

When you click "Ready To Grant," you'll see three paths:

### Path 1: Starting from Scratch

**Best for:** New ideas without existing documents

Click this to access the **8-Module Grant Builder** which guides you through:

- Defining your concept
- Building your hypothesis
- Structuring specific aims
- And more...

### Path 2: Have Some Documents

**Best for:** Partial applications needing completion

- Upload existing documents by section or in bulk
- AI will analyze and help you complete missing sections
- Edit and refine with AI assistance

### Path 3: Documents Ready for Review

**Best for:** Complete drafts needing polish

- Upload your complete application
  - Receive AI scoring and feedback
  - Accept or reject suggested improvements
  - Get compliance validation
- 

## Grant Builder (8 Modules)

The Grant Builder walks you through creating your application step-by-step.

## Module 1: Title & Concept Clarity

Define your research foundation:

- Working title
- Disease area and biological target
- What is known vs. unknown
- Critical knowledge gaps
- Clinical importance

**AI Feature:** Click "Generate Gap Statement" to create a polished gap statement and impact paragraph.

## Module 2: Hypothesis Development

Build your central hypothesis:

- Generate hypothesis from your gap statement
- Validate testability and falsifiability
- Ensure it resolves the identified gap

## Module 3: Specific Aims

Structure your research objectives:

- Add multiple aims (typically 2-3)
- Define scientific questions
- Specify expected outcomes
- Link each aim to your hypothesis

## Module 4: Team Mapping

Identify your collaborators:

- Add team members with their expertise
- Link collaborators to specific aims
- Define roles and contributions

## Module 5: Experimental Approach

Design your methodology:

- Define approach for each aim
- Set timelines and milestones
- Identify risks and alternatives

## Module 6: Budget Planning

Build your budget:

- Personnel costs
- Equipment and supplies

- Subawards and consultants
- Generate AI-powered justifications

## Module 7: Preliminary Data

Document supporting data:

- Link data to specific aims
- Reference figures and tables
- Show feasibility evidence

## Module 8: Summary Figure

Create a visual overview:

- Design figure concepts
- Generate AI summary images
- Visualize your research story

## Using the Grant Builder Controls

Control	Location	Function
<b>AI Toggle</b>	Top right	Turn AI assistance ON/OFF
<b>Save Version</b>	Top right (disk icon)	Save current progress
<b>Export</b>	Top right (download icon)	Export to PDF or Word
<b>Create/Validate Mode</b>	Top right buttons	Switch between writing and validation

## Document Upload & AI Review

### Uploading Documents

#### Section-by-Section Upload:

1. Select the document section (e.g., Specific Aims)
2. Upload your file
3. Receive section-specific feedback

#### Bulk Upload:

1. Upload multiple documents at once
2. AI will categorize and label them
3. Review and confirm assignments

## AI Review Process

After upload, you'll receive:

1. **Score (1-9):** NIH-style reviewer scoring
2. **Strengths:** What's working well
3. **Weaknesses:** Areas needing improvement
4. **Suggestions:** Specific, actionable improvements

## Accepting/Rejecting Changes

For each AI suggestion:

- Click ✓ (checkmark) to **Accept** the change
  - Click ✕ (X) to **Reject** and keep original
  - Review changes before finalizing
- 

## Letters Generator

Access via Dashboard → **Letters Generator**

### Supported Letter Types

Type	Use Case
<b>Letter of Support</b>	Collaborators, advisors, stakeholders
<b>Consultant Agreement</b>	Formal consulting arrangements
<b>Vendor Quote Letter</b>	Equipment or service quotations
<b>Collaboration Letter</b>	Inter-institutional agreements

### How to Generate

1. Select letter type
  2. Fill in required details:
    - Signatory name and title
    - Organization
    - Project title
    - PI information
    - Specific contribution/role
  3. Click "**Generate Letter**"
  4. Copy or download the result
-

# Regulatory Sections

Access via Dashboard → **Regulatory Sections**

## Human Subjects

Complete this section if your research involves human participants:

- Clinical trial status
- Study population
- Recruitment plans
- Risk assessment
- Data safety monitoring

## Vertebrate Animals

Complete this section if your research involves animals:

- Species and strain
  - Number of animals
  - Procedures
  - Pain/distress management
  - Euthanasia methods
- 

# Exporting Your Grant

## From Grant Builder

1. Click the **Download icon** in the top right
2. Choose format:
  - **PDF (HTML)**: For printing and sharing
  - **Word (Markdown)**: For further editing

## Export Contents

Your export includes:

- Cover page
  - Table of contents
  - All completed sections
  - Word count statistics
  - Page limit validation warnings
-

# Tips for Success

## Writing Best Practices

1. **Be Specific:** Avoid vague language; use concrete details
2. **Show Feasibility:** Include preliminary data when possible
3. **Stay Focused:** Each aim should be independent but connected
4. **Know Your Audience:** Write for reviewers in your study section

## Using AI Effectively

1. **Start with Your Ideas:** AI enhances, not replaces, your expertise
2. **Review All Suggestions:** Don't accept changes blindly
3. **Iterate:** Use multiple rounds of generation and refinement
4. **Toggle Off When Needed:** Sometimes manual writing is better

## Common Mistakes to Avoid

-  Overpromising in specific aims
-  Vague or untestable hypotheses
-  Misaligned budget and approach
-  Missing key team expertise
-  Ignoring page limits

## Version Control

- **Save frequently** using the disk icon
- Your last 10 versions are preserved
- Access older versions from local storage

---

## Keyboard Shortcuts

Shortcut	Action
Tab	Move between fields
Enter	Submit forms
Esc	Close modals

---

# Getting Help

## Technical Issues

If you encounter bugs or errors, try:

- 1. Refreshing the page
- 2. Clearing browser cache
- 3. Using a different browser (Chrome recommended)

## Feature Requests

Grant Master is continuously improving. Your feedback helps us build better tools for researchers.

## Quick Reference Card

GRANT MASTER

START: Dashboard → Ready To Grant

THREE PATHS:

- 1. From Scratch → 8-Module Builder
- 2. Some Documents → Upload + Edit
- 3. Ready for Review → AI Review + Polish

TOOLS:

- Letters Generator - Support letters
- Regulatory - Human Subjects/Animals
- Export - PDF/Word download

CONTROLS:

AI Toggle | Save | Export | Create/Validate

**Good luck with your grant application!**

Grant Master - Building Better Grant Applications Together
